

**Rick Edwards** is a Research Aquatic Ecologist with the Pacific Northwest Station's Juneau Forestry Sciences Laboratory. He graduated with a degree in Ecology from the University of Georgia, Institute of Ecology in 1985. His interests range includes aquatic microbial ecology, nutrient cycling in streams and wetlands, hyporheic ecology, carbon cycling and food web energy and material flows. He has conducted aquatic research in forested catchments in the southeast United States, highlands of Victoria, Australia and the Pacific Northwest coast from Willapa Bay to the Wood River Lakes region in Alaska. His current research

centers on controls on productivity of streams habitats in Coastal Temperate Rainforest streams and wetland-stream interactions.
